

Lozier & Lozier's Bred Sow Sale

Wednesday, Aug. 24, 1921
Carrollton, Missouri

A choice offering of real, serviceable Sows, rich in the blood of Pathfinders, Sensations, Orions, and Col's.; bred to Pilot Pathfinder, the greatest son of Royal Pathfinder, Lozier's Great Orion Sensation, a worthy son of the National Grand Champion.

Royal Orion, a richly bred Orion Cherry King. The merit and popularity of our herd was attested by our February sale, which made the highest average of any Missouri breeder. In our coming sale we do not expect fancy prices.

Mr. Breeder and Farmer: There never was a better time to buy pure-bred Durocs than the present. At prevailing prices you are sure of a profit. The hog market has reached bottom and we now have an advancing market.

In the deluge of falling prices in this readjustment period, hogs have continued to show a profit and will, in the future as in the past, be the farmers' surest, safest and best source of profit. Attend our sale and replenish your herd or buy your foundation stock from our choice offering.

They will be sold "worth the money."

Nothing is left undone that can in any way make the home a pleasant place for the growing family and a convenient, pleasant place in which to work.

Mr. Tempel is very fortunate in having an abundant supply of excellent soft water from a nearby spring. This will be piped to the house and barns in

such a way that a fresh supply is insured for family use.

Phosphates Increase Profits.

The acre-yield of wheat on the Willow Springs' experiment field this year was increased 9 bushels by the use of 175 lbs. of acid phosphate per acre, according to F. L. Duley of the Missouri College of Agriculture. With wheat at 90 cents a bushel this increase would be worth \$8.10. If acid phosphate is worth \$22 a ton the cost of soil treatment for one acre would be \$1.93. This would leave a net profit of \$6.17 from the use of phosphate, or an increase of 319 per cent on the money invested.

Where the phosphate has been used in addition to an application of manure the increase was 6.6 bushels an acre. This shows the need for phosphate even though the land is manured. On thin soil the application of phosphorus can be nearly always depended upon to give profitable returns. In fact its use is necessary on many soils to make wheat yields pay the total cost of production and a safe margin of profit in addition.
